

Department of Biological Sciences PhD Candidacy Exam Guidelines for Examining Committee: January 2015

The information below is meant to complement the Supplemental Regulations regarding the Candidacy Exam requirements for the Department of Biological Sciences (see Supplemental Regulations, section 5.8). This additional information is provided to ensure that all students receive consistent instructions.

Timeline

- The Department of Biological Sciences Candidacy Exam typically occurs in the later part of a student's Ph.D. program, after the Thesis Proposal has been approved and no later than 1 year prior to graduation.
- The Candidacy Exam consists of a written proposal and an oral examination; both parts together will be completed over an 8-week time period. This timeline is meant to limit the time that students spend away from research and ensure equitable conditions for all students.
- The 8-week time period can be summarized as follows:

- Identifying possible times when the Advisory Committee is available for the initial meeting and oral exam (8 weeks apart) is usually the responsibility of the student or student's advisor, with support from the graduate secretary in the department.
- The Chair of the Graduate Studies Committee will arrange for the Candidacy Examining Committee Chair and the GSC member who will serve as the external examiner.

Written Proposal

- The topic of the grant proposal will be chosen by the Candidacy Examining Committee in a discussion with the student during a meeting (the "initial meeting" above) that takes place 4 weeks before the proposal is first submitted to the committee (8 weeks before the oral exam).
- Although the student and his or her advisor are encouraged to discuss possible topics in advance of the meeting, the focus of the proposal *should not* be determined until this meeting with the full Candidacy Examining Committee.
- After the general topic has been determined and the student has had an opportunity to further explore and consider the topic, he or she should identify a more specific avenue of research within the bounds of this topic and briefly outline this avenue of research to the Examining Committee (by e-mail) within 1 week of the initial meeting.
- The written proposal will follow the most recent NSERC Discovery grant format. See: http://www.nserc-crsng.gc.ca/ResearchPortal-PortailDeRecherche/Instructions-Instructions/DG-SD_eng.asp.

- The maximum page limit for the proposal will be five (5) pages plus any additional pages for references. Students should not include budget information.
- Students are encouraged to use Discovery Grant proposals from their advisor (or other individuals willing to share their proposals) as guides on how to prepare their own proposals, *but need to ensure that they do not*: 1) take ideas or wording from these proposals; or 2) pass these proposals on to other individuals without the express permission of the proposal author.
- During the 8-week period of the examination, the student may seek clarification and advice from members of the examining committee but *must not* ask any members of the committee (or other individuals) to read and give specific feedback on drafts of the proposal. Although extensive feedback from peers would be encouraged under other circumstances, the Candidacy Examination is an academic exercise for evaluation; *it is therefore expected that the proposal submitted at the end of the 4-week period is entirely the student's own work* (see Plagiarism, below).
- The student should submit the proposal by e-mail (in MS Word to facilitate editing and insertion of comments) to each member of the Examining Committee, including the Chair, by the "Week 4" date determined at the outset. Examiners will provide constructive written feedback on the proposal to the Chair within 1 week of submission; the Chair will promptly give the examiners' comments to the student and also circulate the compilation of comments to all members of the committee.
- The student will then have 2 weeks for revision and resubmission of the written proposal, based on his or her use and evaluation of the written feedback; additional feedback from the Examining Committee will not be provided to the student before the oral exam.
- The student will submit a letter with the final proposal (maximum 3 pages) outlining how he or she addressed the committee's major comments; students may also be questioned on their response at the oral exam.
- The student will be evaluated on both the quality of the first version of the proposal and on how well he or she used or rebutted the Examining Committee's feedback on the original proposal.
- ***Plagiarism will not be tolerated.*** Ignorance regarding what constitutes plagiarism is not a valid excuse for infringement of the policy on academic integrity. Students will be required to sign an Honesty Declaration, and return it to the Examining Committee chair prior to initial submission of the written proposal (i.e., by "Week 4").
- The Candidacy Examination proposal, both conceptually and as a document, will remain, and be recognized as, the intellectual property of the student.

Oral Examination

- The oral exam will start with a 20-minute presentation by the student on the written grant proposal.
- The presentation will be followed by two rounds of questioning from the examiners. Questions will assess the student's breadth and depth of knowledge in areas related to the rationale and themes of the research topics in the grant proposal, related areas outside the grant background, and current topics in the field. Questions may also explore how feedback provided by the Examining Committee on the first version of the written proposal was incorporated or rebutted (see Evaluation).
- The total time allocated to the oral examination (including the presentation) will be a maximum of 2 hours.

Evaluation

- The student will be evaluated (Pass or Fail) separately on the written proposal and on his or her performance during the oral exam.
- In order to receive a Pass on the written proposal, the Examining Committee should not expect that the grant would be funded by NSERC. Students will be evaluated on how well they have achieved the goals of the examination, as outlined in the Supplemental Regulations. The goals related to the written proposal include being able to: 1) use pertinent information in the literature to formulate a research program related to, but not the same as, the student's PhD project; and 2) use the scientific method and formulate testable hypotheses.
- The other goals of the Candidacy Exam are to examine: 3) the student's depth of knowledge in the particular research specialty; and 4) the breadth of knowledge required to research and write the background material for the proposal. The Examining Committee should further evaluate the depth and breadth of the student's knowledge during the oral exam.
- In order to receive a Pass on either component, the decision of the examiners must be unanimous. If the student fails either the written or oral exam (but not both), he or she will have an additional 2 weeks to make further revisions to the proposal or to repeat the oral exam (as required). These revisions will be based on the feedback provided to the student (within one day of the examination) by the Examining Committee and Chair. Successful completion of the repeated component will be deemed a Pass.
- If the student fails both components at the 8-week point, or fails to successfully revise the proposal or the repeat oral exam at Week 10, this will be considered a "first failed attempt" at the Candidacy Examination. In this case, the combined written and oral exam may be taken a second (and final) time; this second attempt should occur with 1 year of the failed attempt. The 8-week process outlined above would be repeated, with a new topic being chosen. It is the intention to retain the same membership of the Candidacy Examining Committee, if possible, although a new Chair may be assigned for the examination by the Chair of the Graduate Studies Committee.
